Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of three two-story, two-bay wide houses late Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built c. 1888 by the same builder responsible for the east side of this block of Stockton St. Two of the houses retain their original brick facades, which were always painted; the other has been covered with formstone.

The houses are two stories in height, 10'6" wide and occupy lots 59' deep. Each house is three small rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located near the front and rear of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by three long scroll-sawn brackets ecorated with grooves, that connect to a lower molding strip, and end with a distinct trefoil pattern. The frieze panel, which also serves as ventilation for the attic, is decorated with a row of leaf-like shapes, created with a jig saw.

The tall, narrow window and door openings have segmentally arched brick lintels, with plain tympanums, and wood sills. All windows are filled with 1/1 sash or are boarded over. Doorways have single-light transoms and a variety of replacement door types. The houses sit on high basements, lit by a tall sash. Each entrance is reached by five concrete steps set parallel with the facade.

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is especially significant in that it represents a high level of architectural stylishness given to small street houses in the late nineteenth century. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1880 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and west of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900. In this particular instance the builder put up three-bay-wide houses of the same style—with brick hoods and wooden scroll-sawn cornices—on the main streets, and similar, only two-bay-wide, houses on the small streets.

Most of the first residents of both main and small street houses in this area were German-Americans, who found work in the many small factories springing up along the city's northern and western edges. Builders usually sold their small street houses in this neighborhood to German-American semi-skilled workers and laborers who received mortgages from the wide variety of community and ethnically-sponsored building and loan associations. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties or sold them to other investors. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because they belong to a small group of surviving small street houses in northwest Baltimore, the vast majority having been cleared during the various urban renewal projects over the last several decades. They are also important because of their proximity to the various railroad and streetcar-building shops located in this portion of the city, as well as the slaughterhouses and their related industries. Housing of this type was built to provide reasonable-priced housing for the many mainly German nmigrants who came to northwest Baltimore to work in these industries in the decades after the Civil War.
